                                                                                                                                                                                                                                                                                            FUNCTION: PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY, BUDDING, MATURATION, AND INFECTION STAGES OF THE VIRAL REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMMATURE VIRION FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY BIND AND PACKAGE TWO PLUS STRANDS OF GEOMIC RNA.

PTM: THE P24 PROTEIN IS PHOSPHORYLATED.

SIMILARITY: CONTAINS 2 CCHC-TYPE ZINC FINGERS.
                                                                                                                                                                                                                                               s SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FUNCTION: PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY, BUDDING, MATURATION, AND INFECTION STAGES OF THE VIRAL REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMMATURE VIRION FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY BIND AND PACKAGE TWO PLUS STRANDS OF GENOMIC RNA.

PTM: THE P24 PROTEIN IS PHOSPHORYLATED.

S RES. Hum. RETRORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE VIRAL ASSEMBLY, BUDDING, MATURATION, AND INFECTION STAGES OF THE VIRAL ASSEMBLY, THE PROTEINS FORM REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMMATURE VIRION FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY BIND AND PACKAGE TWO PLUS STRANDS OF GENOMIC RNA.

PTM: THE P24 PROTEIN IS PHOSPHORYLATED.

SIMILARITY: CONTAINS 2 CCHC-TYPE ZINC FINGERS.

AIDS Res. Hum. Retroviruses 5:411-419(1999).

-1- FUNCTION: PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY, BUDDING, MATURATION, AND INFECTION STAGES OF THE VIRAL REPLICATION OYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMMATURE VIRION FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY BIND AND PACKAGE TWO PLUS STRANDS OF GENOMIC RNA.

-1- PTM: THE P24 PROTEIN IS PHOSPHORYLATED.

-1- SIMILARITY: CONTAINS 2 CCHC-TYPE ZINC FINGERS.

AIDS Res. Hum. Retroviruses 10:1143-1155(1994).
AIDS Res. Hum. PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY, BUDDING, MATURATION, AND INFECTION STAGES OF THE VIRAL REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELET-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMMATURE VIRION FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY

-i- FUNCTION: PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY, BUDDING, MATURATION, AND INFECTION STAGES OF THE VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMMATURE VIRTON FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION BURING VIRAL ASSEMBLY TO SELECTIVELY BIND AND PACKACE TWO PLUS STRANDS OF GENOMIC RNA.
-i- PTM: THE P24 PROTEIN IS PHOSPHORYLATED.
-i- SIMILARITY: CONTAINS 2 CCHC-TYPE ZINC FINGERS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FUNCTION: PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY, BUDDING, MATURATION, AND INFECTION STAGES OF THE VIRAL REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSCCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMMATURE VIRION FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY BIND AND PACKAGE TWO PLUS STRANDS OF GENOMIC RNA. PTM: THE P24 PROTEIN IS PHOSPHORYLATED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          pien M.M., Brown-Shimer S.L.

gag polyprotein - human immunodeficiency virus type 1 (isolate LV)
N;Alternate names; assemblin; core polyprotein; gag precursor
N;Contains: capsid antigen core protein p24CA; core protein p1; core protein p6;
C;Specles: human immunodeficiency virus type 1, HIV-1
C;Date: 17-May-1985 *sequence_revision 17-May-1985 *text_change 05-Dec-1998
C;Accession: A03948
R;Muesling, M.A.; Smith, D.H.; Cabradilla, C.D.; Benton, C.V.; Lasky, L.A.; Capon
Nature 313, 450-458, 1985
N;Title: Nucleic acid structure and expression of the human AIDS/lymphadenopathy
A;Reference number: A93355; MUID:85111157; PMID:2982104
A;Accession: A03948
A;Molecule type: DNA
A;Residues: 1-478 <MUE>

gag polyprotein - human immunodeficiency virus type 1 (strain MN)
N;Alternate names: core polyprotein
N;Contains: core protein pl; core protein pl7; core protein p2; core protein p24;
C;Species: human immunodeficiency virus type 1, HIV-1
A;Note: host Homo sapiens (man)
C;Date: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 26-Feb-1999
C;Accession: A38068
R;Henderson; L.E.; Bowers, M.A.; Sowder II, R.C.; Serabyn, S.A.; Johnson, D.G.; Be
J; Virol. 66, 1856-1865, 1992
A;Title: Gag proteins of the highly replicative MN strain of human immunodeficienc A;Accession: A38068; MUID:92194415; PMID:1548743
A;Accession: A38068; MUID:92194415; PMID:1548743
A;Residues: 1-506 (HEN)

     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gag polyprotein - human immunodeficiency virus type 1 (isolate LV)

W;Alternate names: assemblin; core polyprotein; gag precursor

N;Contains: capsid antigen core protein p24CA; core protein p1; core protein
C;Specles: human immunodeficiency virus type 1, HIV-1
C;Date: 17-May-1985 #sequence_revision 17-May-1985 #text_change 05-Dec-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             probable nucleolar protein NOP5 APE2199 - Aeropyrum pernix (strain K1)

N;Alternate names: core polyprotein
N;Contains: core protein pl5; core protein pl7; core protein p24
C;Species: human immunodeficiency virus type 1, HIV-1
A;Note: host Homo sapiens (man)
C;Date: 30-Sep-1991 #sequence_revision 30-Sep-1991 #text_change 16-Jul-1999
C;Accession: J00065
